gamma and nectin-4 polypeptides and their corresponding polynucleotides.

CC Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial adhesion activity, adherens junction formation activity, epithelial or cc andothelial barrier function activity, endothelial proliferation or cm migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above condethelial barrier function disorder which is treated by the above asthma, allergy, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, proliferation or angiogenic condition of a tissue or a subject, such as stroke, restenosis, tumour growth and treating herpesvirus infection.

CC ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection.

CC smoothelial cell, an epithelial cell or a smooth muscle cell (vascular conduction) and numan nectin-3alpha protein. Human nectin-3 and human nectin-3alpha protein. Human nectin-3 alpha gene is located on chromosome 3. (Updated on 29-AUG-2003 to

```
The invention relates to a substantially purified nectinalsha, beta, gamma and nectin-4 polypeptides and their corresponding polymucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endiding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, paracellular transport disorders such as massarais of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for
                                                                                                                                                             Human, nectin-Jalpha, therapy, cell adhesion, cell proliferation, sepsis, paracellular transport disorder; kidney, diabetic retinopathy, allergy; allograft rejection; metastasis; restenosis; inflammatory bowel disease; oedema, atherosclerosis; ischemia.reperfusion injury; thrombosis; stroke; tumour; cancer; herpesvirus infection; asthma; chromosome 3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Youakim A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sorensen EA,

inhibiting angiogenesis in a mammal and treating endothelial migration, proliferation or angiogenic condition of a tissue or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, etroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithalial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is human nectin-3alpha gene is located on chromosome 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel method for identifying a candidate p53 pathway modulating agent. The method comprises providing an assay system having a purified IG polypeptide or nucleic acid, or their functionally active fragment or derivative. The method is useful for identifying modulators of the p53 pathway, particularly for identifying agents for treating disorders (e.g. breast cancer, colon cancer, kidney cancer, lung cancer or ancer of the ovary) associated with defective p53 function. The identified modulators are useful as targets for novel therapeutics. The method is also useful for disorders associated with defective p53 function. The IG proteins or nucleic acids are useful as modifiers of the p53 pathway, and as therapeutic targets for disorders associated with defective p53 function. This sequence represents a human protein relating to the human IG genes used in the assay for identifying modulators of the p53 pathway of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TTTLQPTIQMHPSTADIEDLATEPKKLPFPLSTLATIKDDTIATIASVVGGALFIVLVS

This invention describes novel cytostatic polynucleotide and polypeptide sequences which can be used in a method for diagnosing prostatic cancer or the risk of developing prostatic cancer. Diagnosing prostatic cancer cancer biggnosing prostatic cancer or the risk of developing prostatic cancer. Diagnosing of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, short-interfering RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 3000, that binds to the polypeptide; an optymential antibody directed against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or radioisotope. The polymorleotides are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           540
by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjects at risk, were incubated sequentially with anti-human CD4 mutine monoclonal antibodies; biotinylated second antibody; streptavidin-conjugated horseradish proxidase and then diaminobenzidine as colour former (brown). The samples were counterstained with hemalum (blue). Malignant cells stained adenocarcinoma, membrane and cytoplasmic staining was very strong, and lymph node metastases were also stained. ADR65805-ADR66954 represent the polymocleotide and polypeptide sequences used in the method of the
                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                          9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes novel cytostatic polynucleotide and polypeptide sequences which can be used in a method for diagnosing prostatic cancer. Cor the risk of developing prostatic cancer. Diagnosis is based on determining over transcription or over expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection consubstances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, short-interfering RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide, an aptamer against the polypeptide; a (monoclonal) antibody (Ab) against the colypeptide, preferably humanised or human; an anti-idiotype, non-human (monoclonal) antibody directed against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or cancer prostope. The polymucleotides are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjects at risk, were incubated concert patients, or subjects at risk, were incubated prostatic cancer patients, or subjects at risk, were incubated sequencially with anti-human CD4 murine monoclonal antibodies; biotinylated second antibody; streptavidin-conjugated horseradish caroningly but non-mailagnent ealls only weakly. In 15 of 63 samples were counterstained with hemalum (blue). Malignant cells stained sequences used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 IVEPHVTAVWGKRVSLKCLIEVNETITQISWEKIHGKSSQTVAVHHPQYGFSVQGEYGGR 120

gamma and nection-4 polypeptides and their corresponding polymucleotides.

Certia DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial corresponding polymucleotides.

Cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above competing asthma, allergy, allograft rejection, metastasis of cancer cells, asthma, allergy, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, stroke, restenosis, tumour growth and treating endothelial migration.

Continis also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell, (vascular smooth muscle cell). The present sequence is human nectin-Jalpha protein containing 7 amino acids deleted from the N-terminal end. Human nectin-

```
The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymotleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as as peripheral nervous injuries, peripheral nervous as system diseases, such as localised neuropathies and central nervous system diseases, such as lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                VWGKONVSLKCLIEVNETITQISWEKIHGKSSQTVAVHHPQYGFSVQGEYQGRVLFKNYSL 128

and heterophilic cell-cell adhesion activities. Nectin-3 polypeptides and polynucleotides are useful for investigating the mechanisms of cell adhesion, infiltration and metastasis of cancer cells, the diagnosis of malignancies of various cancers, and the development of methods for the treatment and prevention of cancer
                                                                                                                                                                                                                                                                                                                                                               KSVWSRLDGQWPDGLLASDNTLHFVHPLTVNYSGVYVCKVSNSLGQRSDQKVIYISDPPT

The invention relates to a substantially purified nectinialpha, beta,

C gamma and nectin-4 polypeptides and their corresponding polynucleotides.

Nectin DNA and protein are useful for treating a disease associated with

C cell adhesion activity, adherens juuction formation activity, epithelial

C or endothelial barrier function activity, endothelial proliferation or

migration activity, viral polypeptide binding activity. The epithelial or

c endothelial barrier function disorder which is treated by the above

mentioned method is inflammation, sepsis, oedema, diabetic retinopathy,

c andothelial barrier function disorder which is treated by the above

mentioned method is inflammation, sepsis, oedema, diabetic retinopathy,

c archma, allergy, allograft rejection, metastasis of cancer cells,

paracellular transport disorders such as magnesium transport defects in

the kidney or inflammatory bowel disease. Nectin DNA is also useful for

c inhibiting angiogenesis in a mammal and treating endothelial migration,

proliferation or angiogenic condition of a tissue or a subject, such as

c ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis,

c stroke, restenosis, tumour growth and treating herpesvirus infection.

Nectin is also useful for modulating proliferation or migration of an

c endothelial cell, an epithelial cell or a smooth muscle cell (vascular

c smooth muscle cell). The present sequence is mouse nectin-Jabpha protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymocleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous containing a polypeptide or polymucleotide of system, such as peripheral nervous system diseases, such as alzeral sclerosis, and Shy-Drager Syndrome. Other uses include the cutilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, archer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and contained the contained and inflammation, leukaemias and contained the contained and inflammation, leukaemias and contained the contained contained the contained contained the contained contai

Gamma and nectin-4 polypeptides and their corresponding polynucleotides.

Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adhesens junction formation activity, epithelial corresponding barrier function activity, endothelial proliferation or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopath, asthma, allergy, allograft rejection, metastasis of cancer cells, asthma, allergy, allograft rejection, metastasis of cancer cells, corresponding angiogenesis in a mammal and treating endothelial migration, inhibiting angiogenesis in a mammal and treating endothelial migration, corresponding or inhibiting or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis is a mammal and treating endothelial migration, stochsemia, atherosclerosis, isochaemia-reperfusion injury, thrombosis, stock, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is human nectin-3alpha-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema,
                                                                                                              Human; nectin-3alpha; therapy; cell adhesion; cell proliferation; sepsis;
                                                                                                                                  paracellular transport disorder; kidney; diabetic retinopathy; allergy; allograft rejection; metastasis; restenosis; inflammacory bowel disease; oedema; atherosclerosis; isothaemia-reperfusion injury; thrombosis; stroke; tumour; cancer; herpesvirus infection; fusion protein; asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a substantially purified nectin3alpha,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         73.6%; Score 2138; DB 5; Length 426; 100.0%; Pred. migration activity, viral polypeptide binding activity. The epithelial or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, proliferation or angiogenic condition of a tissue or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell for modulating proliferation or migration of an smooth muscle cell, The present sequence is a fusion protein containing human nectin-Jalpha protein fused to immunoglobulin IgGl Fc region

Gamma and nectin-4 polypeptides and their corresponding polynucleotides.

Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, is considered or a subject, such as stroke, restenosis, tumour growth and treating herpsevirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular muscle cell). The present sequence is a fusion protein encoding amino acids from mouse nectin-3 protein and the rest form human nectin-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180

paracellular transport disorders such as magnesium transport defects in the kidney or infilammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in ammmal and treating endothelial migration, proliferation or angiogenic condition of a tissue or a subject, such as stroke, restenosis, ischemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an amothelial cell, an egithelial cell or a smooth muscle cell, wascular smooth muscle cell). The present sequence is a fusion protein containing human nectin-3beta protein fused to immunoglobulin IgG1 Fc region
                                                                                                                                                                                                                                                                                                Sequence 595 AA;

```

The invention relates to a substantially purified nectinialpha, beta, gamma and nectin-4 polypeptides and their corresponding polymucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy,

Claim 9; Page 102-104; 141pp; English.

sepsis, stroke.

POLIOVIUS FREEDELS

RAHUDD

POLIOVIUS receptor splice form delta precursor - human

NiAlternate names: poliovius receptor H20B

C;Species: Homo sapiens (man)

C;Date: 30-Jun-1993 #sequence_revision 30-Jun-1993 #text_change 09-Jul-2004

C;Accession: A43024, B31496

R;Koike, S; Horie, H; Ise, I; Okitsu, A.; Yoshida, M.; Iizuka, N.; Takeuchi, K.; Take
